

Let our Training Knives
Shock You!

Stress...

When a human is attacked with an edged weapon, massive physiological and psychological changes take place to prepare the body to survive. These changes will dramatically affect the ability for individuals to perform skills that were easily executed when no stress is present. The Shockknife® uses electrical stimulation to fool the brain into believing the body has been cut without actually breaking the skin. If you are not currently using Shockknife®, ask yourself...

HOW REAL IS YOUR EDGED WEAPON TRAINING?

Your Edged Weapon Training

Is your training knife capable of inducing the necessary fear and stress required for realistic training? If not, you are not adequately preparing your people to survive edged weapon attacks. When it comes to training, your people deserve the best and most advanced training tools in the world. For edged weapons training, that tool is the Shockknife® SK-2.

Shockknife Users

FBI Training Academy, Customs & Border Protection, Federal Air Marshals, Coast Guard, SOCOM, US Army, Marine Corps. RCMP, Canadian Forces, Canadian Border Service, NYPD...and many more.

The SHOCKKNIFE® Advantage

ADVANTAGE #1 – Biofeedback Tool

Set the adjustable SK-2 shock level to LOW and the blade of the knife becomes your instructor. It uses a mild painless shock to provide feedback when your technique needs correction. Save time, energy, and money by training more efficiently.

ADVANTAGE #2 – Stress Exposure Training

A real knife attack creates a feeling of panic causing your body to respond with the "fight or flight" syndrome. That same acute stress can now be replicated during training by setting the SK-2 shock level to EXTREME. At this level the knife sparks and growls, ready to bite with each attack.

ADVANTAGE #3 – Cut Location Indicator

The SK-2 delivers a powerful shock upon contact allowing the trainee to recognize both WHERE and WHEN they were exposed during the attack. The shock will even arc through clothing! Unlike marking knives there is no messy marking compound to clean up after training.

ADVANTAGE #4 – Stress Inoculation Tool

True Stress Inoculation Training involves an incremental exposure to a stressor. The SK-2's four different shock level settings range from LOW to EXTREME, making it the only training tool in the world that can truly claim the ability to provide incremental stress training. The varied settings allow everyone that trains with the SK-2 to advance at their own pace.

ADVANTAGE #5 – Realistic Research

For the first time ever, the SK-2's ability to create fear responses will allow researchers the opportunity to simulate and study realistic edged weapon attacks. Are you or your instructors still teaching the 21 foot rule? Try replicating the study using the SK-2, the results will truly SHOCK you!

ADVANTAGE #6 – Reduced Liability

Are you using the training knife that will best prepare your officers or soldiers to survive an edged weapon attack? The average settlement for failure to provide adequate training is \$1.2 million dollars. The SK-2 is the only training knife in the world that can replicate the same mental and physical responses necessary for realistic training.

* Online Safety Monitor Certification

* **Instructor Training Available** - Shockknife Spontaneous Edge Weapon Defence Instructor Certification (3 Days)

Training Knife Comparison

- Looks like a real knife
- No messy clean up required
- Locates where you've been "cut"
- Tells you when you've been "cut"
- Feels like you've been "cut"
- Can be used as a biofeedback tool
- Is adjustable for Stress Inoculation
- CAN INDUCE FEAR!
